APPLICATION NUMBER : 10051489

APPLICANT : SHIMADZU CORP;

INVENTOR : YAMAMOTO RINTARO;

INT.CL. : G01N 27/447

TITLE : CAPILLARY CASSETTE

ABSTRACT : PROBLEM TO BE SOLVED: To airtightly fix a capillary column, and at the same time to easily separate it from a holder.

SOLUTION: In a capillary column cassette, a capillary column 102 is inserted into a rubber plate 14, is pinched by the elastic force of rubber for fixing, and is arranged two-dimensionally at an injection side, and the capillary column 102 being adhesively arranged on a plane is pinched by a holder plate 6a and a rubber plate 16 from lower and upper sides, respectively, for fixing at a detection side. Since the capillary column 102 is pressed to the holder plate 6a for fixing by the rubber plate 16, a holder 6 for fixing the holder plate 6a to the rubber plate 16 at the both sides of the arrangement of the capillary column 102 is provided.
